

# Plant Life Cycle Fact Sheet

Nutrients and minerals needed for plant growth are taken in by the plant's root system.

## Parts of a Flower

## Basic Photosynthesis

## Wind

Seeds are scattered by the wind blowing.

## Explosion

Seeds are scattered or burst out of the seed pod.

Germination is the beginning of the process of growth.

## Seed Dispersal

## Water

Animals  
Animals, like squirrels, bury seeds that grow into new trees.

Some plants disperse their seeds in waves.

Pollination is when pollen is transferred from one flower to another.  
Fertilisation is the joining of a male and female sex cell.
