

# Water Cycle!!

- A Somewhere out there the (1) \_\_\_\_\_ is shining in a little puddle.  
That's just part of something we call... the water cycle!  
Water from a little puddle turns to gas... (2) \_\_\_\_\_!  
The gas forms into puffy clouds... (3) \_\_\_\_\_!  
The clouds get heavy and the rain pours down... (4) \_\_\_\_\_!  
And more puddles on the ground.
- B Oh~ the water cycle round and round  
Vapor goes up and the (5) \_\_\_\_\_ comes down-  
Water in the sky, in the (6) \_\_\_\_\_, in the ground.  
It's all in a cycle going round and round.
- C Some clouds look like a horse's tail, that's (7) \_\_\_\_\_.  
Some clouds look like cauliflower, that's (8) \_\_\_\_\_.  
Some clouds look like a blanket of gray, that's (9) \_\_\_\_\_.  
There are high clouds, low clouds, and in between clouds.  
(10) \_\_\_\_\_ on the ground is also where we have seen clouds. Yeah, yeah, yeah....
- D Oh~ the water cycle round and round  
(11) \_\_\_\_\_ goes up and the rain comes down-  
Water in a river, in a glass, in a cloud  
It's all in a cycle going round and round.
- E When warm air meets cold air trouble brews.
