

Helping With Math

Adding and Subtracting Similar Fractions and Mixed Numbers

GRADE 4

Adding and subtracting similar fractions, as well as mixed numbers, is just like doing the said arithmetic operations in whole numbers, with the denominators being copied.

One whole pizza is (=) made up of three-fourths and (+) one-fourth of it.

- **Addition** is an arithmetic operation that results with the *sum* or *total*. It is putting two or more numerical values together.
- **Subtraction** is the inverse or opposite of addition. It aims to find out how much of a value is *left* if a certain part of it was taken.
